

## QUICK START GUIDE

Thank you for purchasing the Griffin BlueTrip, wireless Bluetooth™ audio for iPod. BlueTrip delivers the ultimate in CD-quality sound from your iPod to your home stereo, wirelessly, from up to 10 meters (over 30 feet) away. With BlueTrip, you can use your iPod the same way you would use a handheld remote control, but without the remote's traditional barriers of line of sight, walls and ceilings. BlueTrip lets you carry your iPod with you, but instead of listening through headphones, you can realize the full potential of your music through your home stereo speakers.

### PACKAGE CONTENTS

BlueTrip Receiver (aka BlueTrip Sink)  
 BlueTrip Transmitter (aka BlueTrip Source)  
 BlueTrip Receiver Power Supply  
 6' RCA stereo connection cable

*Follow these easy setup steps and you'll be up and running in no time:*

### SET UP THE RECEIVER

1. Position your BlueTrip receiver near your stereo.
2. Plug the AC adaptor into your BlueTrip receiver module.
3. Plug the BlueTrip module into your stereo system using the connectors of your choice. BlueTrip is equipped with stereo RCA plugs (cable provided) and a combination stereo mini-jack for 3.5mm analog or S/PDIF optical connection. Use the connector that best suits your stereo system.
4. Power on your stereo and the BlueTrip receiver. The receiver pairing LED will blink twice per second indicating that it is ready for pairing.

*Connect to your home stereo via your choice of input*

### USING THE TRANSMITTER

1. Plug your BlueTrip transmitter module into the bottom of the iPod.
2. Play some music on your iPod.
3. Your BlueTrip transmitter will automatically search for the BlueTrip receiver. While attempting to pair the BlueTrip transmitter pairing LED will blink twice per second.
4. Pairing and streaming of music will generally begin in about 10–15 seconds, although slightly longer may be needed for the initial connection. When pairing is complete, the transmitter LED will blink once every 3 seconds and the receiver LED will remain on solid.

*NOTE: In order to ensure against unintentional battery drain, should the BlueTrip transmitter fail to pair it will automatically pause the iPod. If this occurs, it may be necessary to unplug and re-insert the BlueTrip transmitter to reset the fail-safe condition.*

### PAIRING WITH OTHER DEVICES

- Your BlueTrip transmitter is capable of pairing with other Bluetooth™ enabled devices that use the A2DP stereo audio profile.
- For initial setup make sure that the BlueTrip receiver is powered down if it is within range.
- Place the Bluetooth enabled headphones in pairing mode (Consult the headphone owner's manual for instructions).
- Follow the instructions for "USING THE TRANSMITTER" above.

### TIPS AND TROUBLESHOOTING

- **What iPods are compatible with BlueTrip?**  
BlueTrip works with iPods with Click Wheel.
- **Does BlueTrip work with other Bluetooth devices, like cell phones or computers?**  
The BlueTrip makes use of the Bluetooth™ A2DP high-quality stereo audio profile. As such, each unit is capable of pairing with third-party devices that also support this profile. (See Pairing with other devices)
- **Does BlueTrip support 5.1 channel audio through its optical audio output?**  
No. While BlueTrip can be connected to a multichannel stereo system via its optical audio output, the iPod only provides 2 channel stereo audio.
- **How is the BlueTrip powered?**  
The BlueTrip transmitter module gets its power from the iPod's battery (no extra batteries needed). BlueTrip's receiver module gets its power from the 12v DC power adapter included.

### TECHNICAL SPECIFICATIONS

- Range: Approximately 10m (33ft.)
- Frequency Used: 2.4GHz
- Audio Ports: Stereo RCA, stereo minijack, optical S/PDIF
- Transmitter Power: (supplied by iPod)
- Receiver Power: 12v DC (power supply included)
